# EULAN<sup>®</sup> SPA 01

## Effective

EULAN<sup>®</sup> SPA 01 treated uniforms or garments have a knock-down effect on flying insects like mosquitoes and flies and on crawling insects like ants, mites and cockroaches. The finish is focused to protect people against bites of an insect that transmits an infectious agent. Some of these vectors are indicated aside.

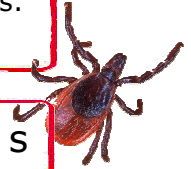

## Used by NATO

The anti-insect concept is composed of various components to ensure performances as required in NATO-uniforms. These uniforms have to comply with the strong TL 8305-0331 norm and are used by soldiers deployed at malaria endemic regions.

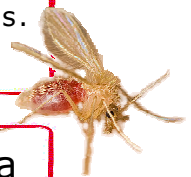

## Lyme Disease

Lyme disease is transmitted to people by the bite of infected ticks.

## Leishmaniasis

Leishmaniasis is caused by the bite of infected female phlebotomine sandflies.

## Malaria

Malaria is caused by parasites transmitted through infected female Anopheles mosquitoes.

## Safe - Öko-tex Standard 100 approved

Vast toxicological tests show that EULAN<sup>®</sup> SPA 01 treated clothes are safe to wear. The finish is odorless and has no negative effect on the handle. Permethrin is approved by the WHO and by EPA.

## Long Lasting

Extended durability against laundering, up to 100 home laundries, is achievable in combination with BAYPRET<sup>®</sup> NANO-PU.
